Thanks you for choosing Fingerex for Windows 3.8. Based on excellent fingerprint identification solution from Digent, this authentication engine can fortify your legacy system's access security.

What is Fingerex?

Fingerex is high speed fingerprint authentication client/server engine for single sign on for enterprise's legacy application system.

With Fingerex, existing password based authentication will be replaced with highly secure fingerprint authentication, which makes virtually impossible to steal identity.

With easy-to-integrate design of Fingerex, any web or client/server based application can utilize state-of-the art fingerprint authentication.

Why Fingerex?

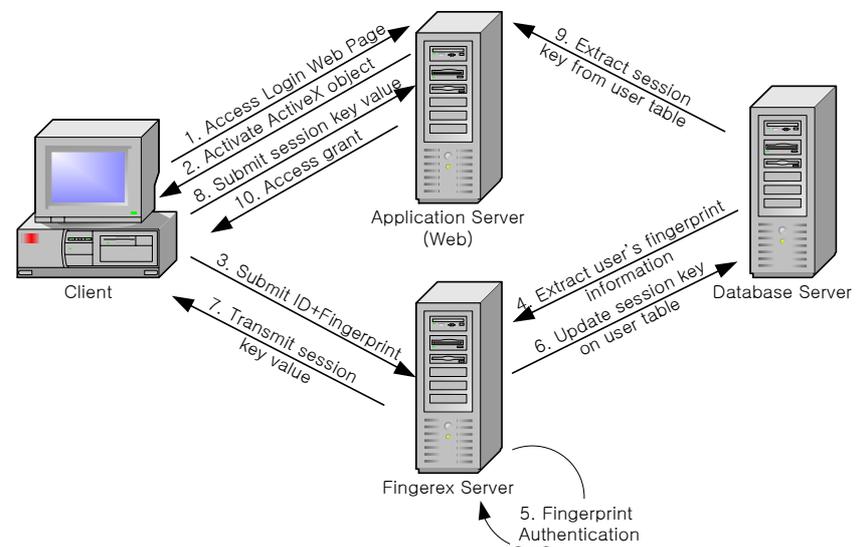

Thanks to simple integration method, Fingerex can be easy choice when it comes to integration with existing web-based or client/server based enterprise application.

Fingerex is not only support 1:1 matching, but also support 1:N matching. For 1:N matching, user does not have to submit it's user ID but only one's fingerprint. With this functionality,

entire security of system can be operating only with fingerprint.

Typical Implementation

Following diagram, demonstrate typical web-based application implementation of Fingerex.

Supported Devices

Fingerex for Windows 3.8 supports following devices for client fingerprint acquiring;

- IZZIX FM1000 Mouse
- IZZIX FD1000 Fingerprint capture device

Fingerex comes with complete device driver and client module.
No additional software is needed.
